

LAP OF LUXURY:

Imagine an ergonomic computer chair that adjusts to the contours of your back, providing perfect support to your spine.

The Verte', with 11 tor-

sion spring-loaded bearing joints, does just that: It takes an impression of your

spine, then locks it into memory with a single touch of a lever. A team of doctors, chiropractors and engineers designed Verte' to reduce back pain. Its seat has extra-thick foam for those who sit for hours, and its soft, black leather contours adjust in multiple dimensions—not just up, down, forward and back, but also to the left and right (price: \$1,199, www.ergonomichome.com/ercoch.html, 877-550-2678). —*Gisela M.
