

WHAT DO I NEED FOR THE LEGRAND ADORNE WI-FI LIGHTING SYSTEM?

MASTER DIMMER/SWITCH-- This will connect directly to your light and is the main controller. One per light.

REMOTE DIMMER/SWITCH-- Install these anywhere else you need to control the light. They pair wirelessly with the Master and do not need to be directly wired to the light. Install just one or as many as needed.

LIGHTING CONTROL APP-- A free app on the App Store and Google Play that can control all the lights, set scenes, alarms, and so much more from your iOS or Android smart device.

Available on the
App Store

 **Google play**

THE HUB-- This is the brain of the Wi-Fi system. Connect this directly to your internet modem.

REPEATER/EXTENDER-- This optional accessory adds another 200 feet to the Hub range and records light usage to emulate normal activity when away.
