

About Kistler Equipment Co

Kistler Equipment has been in business since 1964. We successfully supply the region's key industrial companies with various industrial equipment. However, our specialty is the manufacture and distribution of overhead lifting equipment. We can provide full turnkey project support from spec development, design, supply, install, commissioning, and training.

In addition, we offer post-sales support related to service/repair/and annual inspections

Safety Saves Training

Kistler Equipment Company is a regional leader related to training operators and designated qualified

**THINK
THE LIFE YOU SAVE
MAY BE
YOUR OWN**

individuals in the importance of safely operating over-

head lifting equipment. We cover key requirements from OSHA, ANSI, ASME, and CMAA. We can assist companies with as little as one or two crane or hoist operators on site to those with hundreds. Our combination of classroom training and practical hands-on ensures maximum learning for your personnel. Kistler has the capacity to train up to 16 personnel in our own training facility. However, we often provide training at our customers' facilities. Anytime-Anywhere is our training motto. We understand our customers sometimes have multiple shifts and locations.

Crane Operator Training

Kistler Equipment offers this course on the 1st Tuesday of each month. Any new employee who will be operating overhead lifting material (cranes and hoists) will benefit from this class. We realize that there is turnover in your staff regularly. We created this monthly class to provide our customers with an easy alternative to ensure they get the appropriate training to new personnel as soon as possible. Coursework will cover regulations with a heavy emphasis on pre-operational inspection requirements, operator responsibilities, proper lifting techniques and equipment familiarization.

Train—The—Trainer

Kistler also offers a much more in

depth train-the-trainer class for crane operator training. This is a highly customizable class that can span 1-2 days depending on course

content developed between Kistler Equipment and our customers. Content often is a combination of operator training, basic rigging, rigging gear and sling inspection. In addition, we can provide training on our customers' particular policies as they relate to training requirements for new operators, lift plans, frequent and periodic inspection requirements (including paperwork), homemade below-the-hook lifting devices, and load testing.
