

USGI Sling Installation: M1 Garand M14/M1A M16

www.AmmoGarand.com *M1 Garand Parts and Accessories*

1. Attach the J-hook to the lower sling swivel so the open end of the J-hook faces outboard, away from the rifle.

2. Open the sling keeper buckle by pulling up on the tabbed end of sling.

3. With clamping buckle fully opened, carefully slide tabbed sling end through buckle. Don't use excessive force and sliding canvas left and right will make removal easier.

4. Run tabbed end through front ferrule swivel and tabbed sling end back through clamping buckle and close clamp at desired length.

(Flat side of clamping buckle faces toward rifle)

****Note:** Install instructions are for normal military installation. Variations can be made for ease of use or personal preference.
