

CHECKLIST

Fireplace Framing: Quality Control

- Did the installer locate all electrical and/or plumbing that may be in the way or needed for the fireplace?

- For an external chase, did the installer fully clear the site for the concrete pad and compact the soil before adding reinforcement bars/mesh and pouring the concrete?

- Does the size of the enclosure seem to fall in line with what you discussed during the design phase?

- As framing continues, does everything appear to be accurately measured and level?

- Does the framing material appear to be good quality, with no warped, twisted, or aged boards?

NOTES
